

Artemis Koltsida (she/her) is an architect engineer and interdisciplinary creative with an MA in ICTE. Emerging from a background in film production, she cultivates a practice grounded in observation, precision, and spatial thinking. Operating between architecture and her DIY studio, she works across analogue and digital processes, framing her methodology as “An Analogue to Digital Journey”: an ongoing inquiry into media, tools, and the translation of ideas into material form. This evolving research is extended through her video series “How to be curious”, where experimentation functions as both method and reflection. Within this practice, storytelling operates as a structuring device. Her work extends into narrative and spatial construction as interconnected frameworks. Recently, she has developed a fictional island as an open-ended structure for collective authorship, inviting collaborators to inhabit and continuously shape its evolving narrative space.
